

SHIVARAJ DODDAGOUDRA

Aspiring Software Developer · DevOps

+91 7483235451 | shivarajdoddagoudra18@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | Bengaluru, Karnataka

PROFESSIONAL SUMMARY

Full Stack Developer (Java, Python) and DevOps Engineer building and shipping cloud-native applications end-to-end—from database schema and REST APIs to production deployment. Proficient in Python and Java for backend development, with hands-on frontend experience in React, and skilled in designing scalable, secure applications using Flask, MySQL, and JWT-based authentication. Backed by real production experience: as a DevOps Engineer Intern at Vtricks Technologies, automated AWS infrastructure with Terraform. Also applies Python to deep learning (TensorFlow/Keras) for real-world diagnostic tooling. Seeking Full Stack Developer or Software Engineer roles with end-to-end feature ownership. Available immediately for on-site or remote roles.

TECHNICAL SKILLS

Languages: Java · Python · C · JavaScript · HTML · CSS

Frameworks & APIs: Flask · React · Bootstrap · REST API · MVC · JWT · Nginx

Databases: MySQL · SQLite · Relational Schema Design

Cloud & DevOps: AWS (EC2, EKS, S3, IAM, RDS) · Docker · Kubernetes · Jenkins · GitHub

Actions · Terraform · Ansible · SonarQube · Nexus · Prometheus · Grafana

ML / DL: TensorFlow · Keras · OpenCV · Streamlit · Grad-CAM · MobileNetV2 · ResNet50

Tools: Git · GitHub · VS Code · PyCharm

Concepts: OOP · DBMS · Microservices · CI/CD · DevSecOps · Observability

PROFESSIONAL EXPERIENCE

Vtricks Technologies

DevOps Engineer Intern

Feb 2026 – May 2026

Bengaluru, Karnataka

- Architected end-to-end cloud infrastructure on AWS (EC2, EKS, S3, IAM, RDS) using modular Terraform IaC, eliminating manual provisioning and cutting environment setup time by ~70% across the engineering team.
- Designed and deployed a production-grade Kubernetes strategy—Pods, Deployments, Services, Ingress—containerizing 5+ microservices with Docker and orchestrating zero-downtime rollouts on AWS EKS.
- Engineered a fully automated Jenkins CI/CD pipeline integrated with GitHub webhooks, reducing manual deployment effort by 80% and enabling consistent, repeatable builds across dev, staging, and production.
- Implemented DevSecOps gates by integrating SonarQube for static code analysis and Nexus for artifact management, enforcing quality thresholds before every production release.
- Established full-stack observability with Prometheus metrics collection and Grafana dashboards, enabling real-time performance monitoring and cutting mean incident response time by ~50% via proactive alerting.

KEY PROJECTS

Shopwave — Microservices E-Commerce Platform | Python · Flask · React · MySQL · Docker · JWT · Nginx · REST API

- Designed a 4-service microservices architecture (Auth, Products, Orders, Notifications) containerized with Docker and routed via Nginx API Gateway, demonstrating production-grade distributed system design.
- Built a React SPA with full checkout flow connecting to independent backend services via REST API, delivering end-to-end fullstack ownership from database schema to UI.
- Implemented JWT-based authentication and role-based access control (RBAC) with a normalized MySQL schema for users, products, and orders.

COPD Detection from Chest X-Ray — Hybrid Deep Learning Model |

Python · TensorFlow/Keras · OpenCV · Streamlit · MobileNetV2 · ResNet50

- Built a dual-stream fusion model combining MobileNetV2 and ResNet50 to classify NORMAL vs. COPD chest X-rays, achieving high diagnostic accuracy on a clinical imaging dataset.

- Applied Grad-CAM visualizations to highlight lung regions influencing model predictions, improving clinical interpretability and supporting radiologist decision-making.
- Delivered a Streamlit web application with patient intake forms, real-time prediction with confidence scores, and automated PDF diagnostic reports generated via ReportLab.

QR-Based Receptionist Entry System | Python · QR Code · SQLite/MySQL · Flask · Tkinter

- Automated visitor entry logging by replacing manual paper records with a QR scan-and-validate system, storing all data securely in a relational database.
- Built an admin dashboard for viewing visitor history, detecting duplicate entries, and flagging invalid QR codes in real time.

EDUCATION

UBDT College of Engineering, Davanagere Master of Computer Applications (MCA) · 7.98 CGPA Visvesvaraya Technological University (VTU)	2024 – 2026
Bapuji Institute of Hi-Tech Education, Davanagere Bachelor of Computer Applications (BCA) · 73% Davanagere University	2021 – 2024

ADDITIONAL

Languages: Kannada (Fluent) · English (Professional) · Hindi (Basic)
Availability: Immediate · On-site & Remote · Open to Relocation
Interests: Learning New Technologies · Problem Solving
